

12.0 Plan maintenance and review

Proposed plan maintenance will be bi-annual, with a comprehensive review proposed every five years.

Bi-annual review of the plan and mitigation recommendations will be necessary as various projects or task are accomplished and areas at-risk decline. Bi-annual review will also be needed as County infrastructure needs change or are met.

A bi-annual review with the wildfire group will allow State and Federal Land managers to initiate required planning procedures for identified mitigation projects and to update or modify mitigation recommendations.

A total review every five years (2009) is recommended as Bear lake County infrastructure needs change, specifically: population increases, fuels reduction projects are completed, emergency services communication needs are met or increase, and priority watersheds' risk from a wildfire is mitigated.
